

## Ask HN: What are the best web tools to build basic web apps as of October 2016?

Sat Jan 17 2016 by arikr | 47 comments

Questions:

1: Which technologies are popular and what do people like about them? (To help someone deciding between). Seems like React frontend, or perhaps Vue? and Node being the popular backend?

2: Is there a site that keeps track of the various options for frontend and backend frameworks and how their popularity progresses?

## Tensorflow Officially Supports Cuda 8.0

Sat Jan 17 2016 by wagonhelm | 2 comments

As you can see here TensorFlow now supports Cuda 8.0

<https://github.com/tensorflow/tensorflow/releases>

I also have this tutorial on how to install it from sources.

## Q: Why do so many major services (ex Twitter) use ONLY a single DNS provider?

Sat Jan 17 2016 by danyork | 3 comments

I don't get it... why do so many major Internet services such as Github, Twitter, SoundCloud and more use only a SINGLE provider of DNS hosting for their DNS records? It used to be that you always made sure you had a second provider doing "secondary DNS" for you. Have people just forgotten this common practice? Or are there other reasons I'm missing?
